

## Proper pH in water

It has been proved by scientists that the human body needs slightly alkaline water with pH above 7 (7.2 – 7.8). This is exactly the pH of highly pure, organic waters from subterranean springs, which are ideal for keeping good health.

The inferiority of minerals in water, including heavy metals, makes it acidic and improper for the body. Eva Advanced Water Filtration System removes most of the harmful substances from tap water and helps to regain its alkaline pH. Water that comes out of the Eva Water Filter does have the pH level of 7.2 - 7.8, which is ideal for your good health.
